Dear Prevention Partner:

Thank you for your interest in behavioral health prevention and your intent to apply for community/regional funding through the Strategic Prevention Framework State Incentive Grant (SPF SIG) Request for Proposals. This **Resource Guide** is designed to provide information to assist you in completing your FY12 grant proposal. As outlined in the request for proposal (RFP), specific criteria must be met for your proposal to be competitive. The first section offers general prevention information following the five steps of the Strategic Prevention Framework (SPF). Within each step, additional information, resources, samples and templates are provided. As you develop your proposal it may be helpful to review additional information through web sites, articles, books, journals or other resources.

We encourage proposals from communities wanting to promote systems change related to reducing underage drinking as well as adult heavy and binge drinking and the consequences from both. Please note that applicants for these funds must be a community/regional coalition; while a single agency may apply for the coalition as its fiscal agency, it must be clear that the planning, the proposal and the continuing work will be completed through a community coalition.

The Alaska Strategic Prevention Framework State Incentive Grant is a federally funded cooperative agreement whose goals include building prevention capacity and infrastructure at the State and community levels; preventing the onset and reduce the progression of substance abuse; and reduce substance abuse-related problems in communities. This Resource Guide is not all inclusive; but it is a good resource to assist you both now, as you prepare a proposal in response to the SPF SIG Request for Proposals, but will also be extremely helpful once communities are funded and the hard work of assessment, capacity building, planning, implementation and evaluation begin to take shape.

Please join our prevention partnership as we work together, community by community, to create a strong, healthy and positive Alaska.

Most Sincerely,

DBH Prevention & Early Intervention Team

Section I: General Concepts

The intent of the Alaska Strategic Prevention Framework State Incentive Grant is to make state, regional and community level change, related to population-level indicators. All proposals will work toward the long-term outcome: *All Alaskan communities, families and individuals are free from the harmful effects of alcohol use, dependency and addiction.* Table 1 provides a list of State Level Population Indicators that all projects should contribute to improving at the state level, as well as the regional/community level. PLEASE NOTE: You are *not required* to track these state-level population indicators, but your community strategies must be able to contribute to change in Long-Term Outcome I (Youth Substance Abuse Indicators and Adult Substance Abuse Indicators) over time. As you identify your short-term outcomes, think about how they will *contribute* to these population indicators.

Prevention and Early Intervention, Key State Level Population Indicators for Alaska	
Goal: To promote Prevention Prepared Communities	
Long-Term Outcome I	
<i>All Alaskan communities, families and individuals are free from the harmful effects of alcohol use, dependency and addiction.</i>	
Youth Substance Abuse Indicators	
1	Youth who use alcohol before age 13
2	Youth who engage in drinking (past 30 days)*
3	Youth who engage in binge drinking
Adult Substance Abuse Indicators	
5	Adults who engage in heavy drinking*
6	Adults who engage in binge drinking*

*Is a Key Population Indicator on the [2009 Alaska Scorecard](http://www.hss.state.ak.us/dhcs/healthplanning/scorecard/assets/scorecard.pdf), <http://www.hss.state.ak.us/dhcs/healthplanning/scorecard/assets/scorecard.pdf>

Data Sources

Youth Substance Abuse

1. Youth who use alcohol, tobacco, or marijuana before age 13. Percentage of students that have used either: tobacco, alcohol or marijuana before the age of 13. ^{YRBS}

2. Youth who engage in drinking (past 30 days)*
Percentage of students who had at least one drink of alcohol, on one or more of the past 30 days ^{YRBS}

3. Youth who use Illicit drugs* (including prescription drug misuse). Percent of persons aged 12 or older who report using

illicit drugs in past month; including marijuana/hashish, cocaine (including crack), heroin, hallucinogens, inhalants, or prescription-type psychotherapeutics used non-medically. ^{SAMSHA}

4. Youth who receive repeat Minor Consuming charges
percentage of youth who receive more than one Minor Consuming Charge, as reported on AS04.16.050(c) & AS04.16.050(d) AK Court System

Adult Substance Abuse

5. Adults who engage in heavy

drinking* Percent of adults who reported heavy drinking in the past 30 days (two or more drinks daily for men and one or more daily for women) ^{BRFSS}

6. Adults who engage in binge drinking* Percent who reported drinking five or more drinks on one occasion in past 30 days. ^{BRFSS}

7. Adults who use illicit drugs* (including prescription drug misuse) Percent of persons aged 12 or older who report using illicit drugs in past month; including marijuana/hashish, cocaine (including crack), heroin,

hallucinogens, inhalants, or prescription-type psychotherapeutics used non-medically. ^{SAMSHA}

SAMHSA'S Strategic Prevention Framework

The purpose of the Strategic Prevention Framework is to build the capacity and infrastructure for States, tribal organizations, and communities to decrease substance use and abuse, promote mental health, and increase overall health and wellness. The Strategic Prevention Framework (SPF) utilizes the following five-step process. For additional information, tools, strategies or ideas on how to best utilize each step, link to the SAMHSA Prevention Platform website at: <https://preventionplatform.samhsa.gov>

Step 1) Assessment

Profile population needs, resources, and data to address the problems and gaps in service delivery.

Communities must accurately assess their behavioral health-related conditions using local, regional and state data. Data should identify the magnitude of the problem to be addressed, where the problem is greatest, and risk and protective factors associated with the identified problem. Communities must also assess community assets and resources, gaps in services and readiness to act.

You should begin by using the provided section on resources and links to web sites that publicly list State and regional data that you may use in developing your needs assessment. It may be more challenging in smaller or rural communities to identify local data that further defines the conditions you wish to change. Focus groups, community surveys or key leader interviews may be helpful in gathering local data. You will also need to assess community readiness in order to determine what capacity you will have to implement strategies that you will later choose during the planning stage. Matching interventions to community's level of readiness is critical for success.

Key Milestones	Key Products
<ul style="list-style-type: none"> • Collaboration with advisory groups • Collection & analysis of local/regional data • Development of problem statements • Identification of potential geographic target areas/populations • Analysis of resources: programs, facilities, key individuals and leaders, potential partnerships • Assessment of organizational, fiscal and leadership capacity • Assessment of cultural capacity • Analysis of service and resource gaps 	<ul style="list-style-type: none"> • Clear, concise and data driven priority BH issue. • Data sources for ongoing assessment • Community resource assessment (community program, resource and service base-line inventory) • Gap analysis (resources and services)

Step 2) Capacity

Mobilize and/or build capacity to address needs.

Bringing together key stakeholders at the State, regional, and local levels is critical to plan and implement successful prevention activities that can be sustained over time. Key tasks may include, but are not limited to,

convening leaders and stakeholders; building coalitions; training stakeholders, coalitions, and service providers; organizing agency networks; leveraging resources; and engaging stakeholders to help continue the activities.

Community readiness tools, assessments and strategies to increase readiness are available from the Tri-Ethnic Center for Prevention Research <http://www.triethniccenter.colostate.edu/communityreadiness.shtml>. You may choose to adapt this tool to meet your needs or create your own readiness tool.

Key Milestones	Key Products
<ul style="list-style-type: none"> • Creation and continuation of partnerships • Invitation to stakeholders who are not yet involved • Meetings and workshops with key stakeholders, coalitions and service providers • Further define level of community readiness to address identified issues • Introduction of training and education to promote readiness, cultural competence, leadership and evaluation capacity 	<ul style="list-style-type: none"> • Directory of key stakeholders, leaders and service providers • Partnership agreements/memorandums • Capacity report with quarterly updates • Community readiness summary

Step 3) Planning

Develop a comprehensive Strategic Plan.

Communities must develop a strategic plan that provides a vision for the prevention activities and strategies for organizing and implementing prevention efforts in their community. A strategic plan must be based on documented needs, build on identified resources/strengths, set measurable outcomes and include the performance measures and baseline data against which progress will be monitored. Plans may be adjusted as the result of ongoing needs assessment and monitoring activities. The issue of sustainability should be a constant throughout each step of planning and implementation and should lead to the creation of a long-term strategy to sustain policies, projects and practices. The strategic plans must be data-driven and focused on addressing the most critical needs in the State, region and locale.

A *Logic Model* identifies the core components of the strategic plan. These include the long-term outcome(s) of the grant project, selected risk and protective factors you wish to change, resources available or “inputs”, activities you plan to implement, prevention strategies, population you intend to serve, the number or amount of delivered services or people served (outputs), and short and long term outcomes. The sequence of the *Logic Model* should flow and provide a rationale between the prioritized risk and protective factors, selected activities and prevention strategies and expected outcomes.

Key Milestones	Key Products
<ul style="list-style-type: none"> • Planning meetings and development sessions • Further define geographic target population • Define long-term and short-term measurable outcomes from assessment, select key strategies and performance targets • Draft strategic plan • Logic model development • Identify risk and protective factors that affect outcomes identified • Selection of policies, programs and practices • Preliminary action plan and timeline development • Creation of evaluation plan 	<ul style="list-style-type: none"> • Comprehensive strategic plan • Logic model • Preliminary action plan and timeline • Performance outcomes • Evaluation plan and performance measures

Step 4) Implementation

Implement evidence-based prevention policies, projects and policies and infrastructure development activities.

The findings of your needs assessments should be used to guide selection and implementation of policies, projects and practices that will be effective in measuring community change. For information on SAMHSA Evidence-Based programs go to <http://www.nrepp.samhsa.gov/>. For additional guides including *Identifying and Selecting Evidence-Based Interventions* or *Native Aspirations: Evidence Based and Practice-Based Interventions in Indian Country*, go to <http://hss.state.ak.us/dbh/prevention/publications/>. Please note that community implementers should ensure that community and culturally responsive adaptations are made, when replicating an evidence-based program, without sacrificing the core elements of the policies, projects and practices. All selected strategies need to have existing evidence of effectiveness or a clear plan to assess ongoing effectiveness of the strategy toward community change.

Key Milestones	Key Products
<ul style="list-style-type: none"> • Collection of process data and additional pre-implementation data • Full action plan development, timeline, identify partners responsible for each strategy • Acquisition of relevant materials for implementing evidence-based policies, programs and practices • Implementation of strategic plan • Consultation and collaboration with evaluation team • Implementation of evaluation plan 	<ul style="list-style-type: none"> • Finalized action plan and timeline • Identified evidence-based policies, strategies and practices • Further refined evaluation plan

Step 5) Evaluation:

Monitor process, evaluate effectiveness, sustain effective programs/activities, and improve or replace those that fail.

Ongoing monitoring and evaluation are essential to know if the outcomes desired are achieved and to assess project effectiveness and service delivery quality. Communities should collect outcome data on a regular basis, so that projects can monitor, evaluate, sustain and improve their community-based prevention activities and know they are reaching the desired target population and reaching the identified project outcomes. Key questions that you must address include how much are you doing, how well are you doing it, and is anyone better off?

Data to be collected as identified on the *Logic Model* includes *outputs* (the type and number of services delivered and the number of persons served), and *outcomes* (the expected measurable change in attitude, knowledge, skills, conditions, and/or behaviors). If it is determined that the activities and strategies used are not meeting the desired outcomes, then modifications may be needed or it may be necessary to revisit earlier steps in the SPF assessment process. Both assessment and evaluation are ongoing processes necessary to determine if our prevention efforts are making a difference in the population or community we are serving.

Key Milestones	Key Products
<ul style="list-style-type: none"> • Consultation and collaboration with evaluation team • Process evaluation • Collection of required data (outputs, participant feedback, measure change in outcomes) • Review of effectiveness of policies, projects and practices • Development of recommendations for quality improvement 	<ul style="list-style-type: none"> • Evaluation report and updates • Recommendations for quality improvement

The Strategic Prevention Framework does not guarantee results; it does allow you to be fully aware of the important work you are doing and will help to bring clarity to your strategies, interventions and overall community change process.

Be flexible in allowing the SPF process to occur. This requires patience, a commitment to and understanding of where you are in the process, and how to use the SPF to achieve the outcomes you desire for your community. The Strategic Prevention Framework is a dynamic and integrated process and requires you to move back and forth among the five steps to implement a well-developed and effective plan. If you are open to the process, you will find that the SPF model not only provides you with clearly defined tools and strategies to plan your prevention approach, but it also enables you to build sustainable and culturally responsive strategies to meet the needs of your community.

Institute of Medicine (IOM), Prevention Classifications

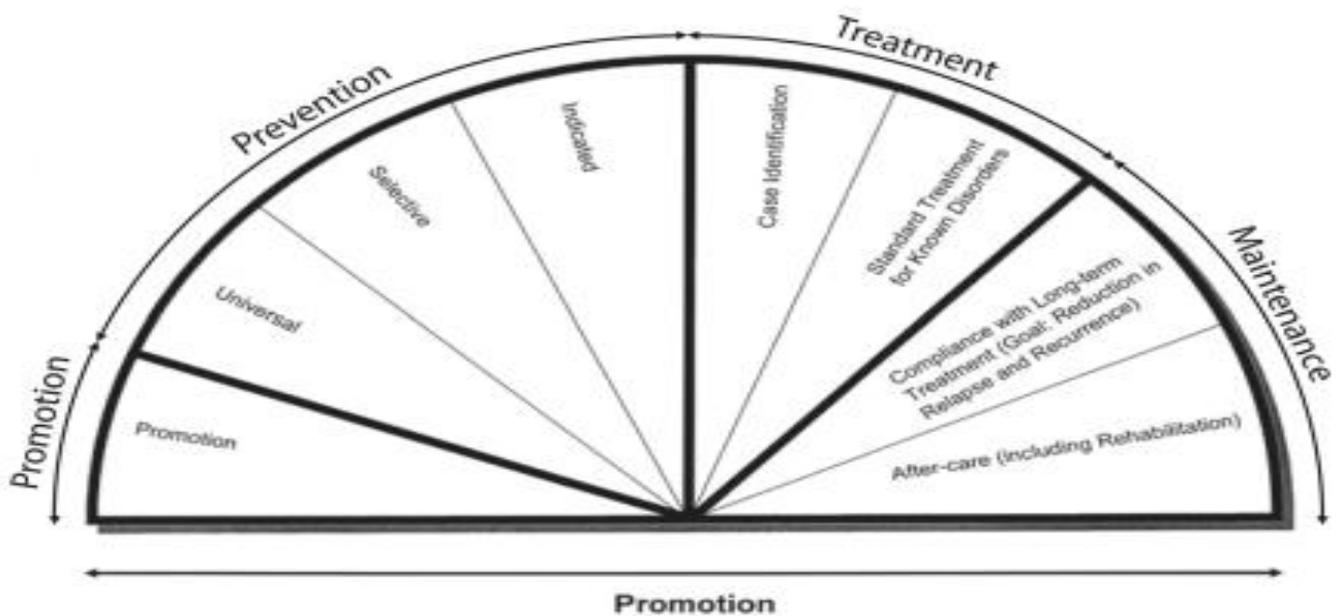

The Institute of Medicine (IOM) system classifies prevention strategies and activities according to the populations they intend to affect. Prevention strategies are divided into one of three IOM classifications:

- **Universal strategies:** (indirect or direct): target the general population
- **Selective strategies:** target people at *higher-than-average risk* for the problem behavior
- **Indicated strategies:** target people already experiencing or engaging in problem behaviors, but *may not* have been diagnosed with a disorder.

The Institute of Medicine took its prevention classification a step further by developing a *Continuum of Care* as shown in the diagram below¹. The Continuum shows the relationship between the **Promotion** of health and wellbeing to **Prevention**, **Treatment** and **Maintenance** within the various stages of the health care process.

Continuum of Care

Mental Health Intervention Spectrum

Mental Health Promotion includes efforts to enhance individuals' ability to achieve developmentally appropriate tasks (developmental competence) and a positive sense of self-esteem, mastery, well-being, and social inclusion and to strengthen their ability to cope with adversity.

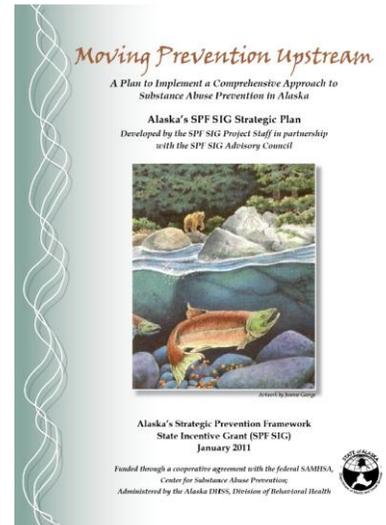

¹ Institute of Medicine Prevention Mental, Emotional, and Behavioral Disorders Among Young People (2009, pg 67).

Relevant State Plans

Moving Prevention Upstream: Alaska Strategic Plan

The Alaska Strategic Plan was developed for the Strategic Prevention Framework State Incentive Grant and approved by the Center for Substance Abuse Prevention. This plan elaborates on the Advisory Council's process of selecting Alaska's SPF SIG priority areas of underage drinking and adult heavy and binge drinking. It also speaks to how Alaska will allocate SPF SIG funds and how we will work toward and evaluate outcomes, as well as building state prevention infrastructure and capacity.

State Epidemiologic Profile on Substance Use, Abuse and Dependency

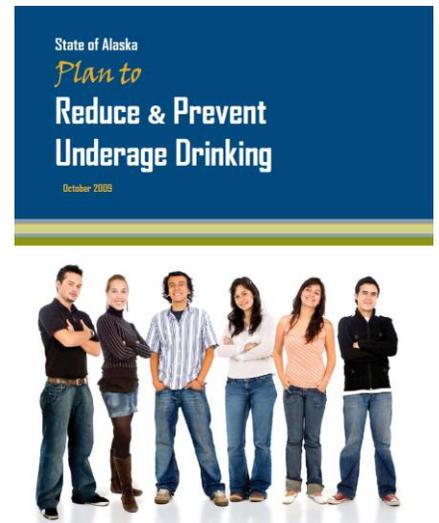

This profile highlights substance use, abuse and dependence and consequence data from the Behavioral Risk Factor Surveillance System, the Youth Risk Behavior Survey and the national Survey on Drug Use and Health. The Alaska Epi Profile provides a means for managers and planners to identify potential data sources from select agencies monitoring the prevalence of behaviors associated with consumption and consequences of substance use.

Click [here](#) for a copy of the Alaska Epidemiologic Profile

Alaska's Plan to Reduce and Prevent Underage Drinking

The State of Alaska Plan to Reduce and Prevent Underage Drinking is organized to provide recommendations on three levels of interaction (national; state; and community) and eight strategy components (media campaign; alcohol advertising; limiting access; youth oriented interventions; community intervention; government assistance and coordination; alcohol excise taxes; and research and evaluation).

Click [here](#) for a copy of The State of Alaska Plan to Reduce and Prevent Underage Drinking.

What is Resiliency?

Resiliency is the ability to “bounce-back” and successfully overcome life challenges and problems. People who are resilient have supportive family and friends, possess skills to cope with life successfully, and are engaged in activities that give their life meaning and

Increasing Resiliency

Resiliency is nurtured through supportive relationships and being involved in activities that:

1) Have meaning and purpose; 2) Teach and practice life skills and social competencies (sometimes called Social Emotional/ Employability Skills). Three factors contribute to resiliency:*

- Connectedness – Connectedness is experienced as connection to people or a positive affiliation to “places”. Emotional support is provided by being close to, or attached to other people. Support provides assistance in working through problems, and guidance in taking on new challenges. Throughout the relationship, high expectations are maintained.
Connectedness also refers to a sense of “belonging” or identity” to a place or organization (i.e. feeling connected to school, a club, a team, a cause, or their culture.) Activities that increase supportive caring relationships and/or a sense of belonging to positive pro-social organizations, contribute to resiliency.
- Meaningful Engagement – Involvement in activities that give life meaning and purpose contribute to resiliency. Meaningful engagement efforts often include helping others or improving local conditions (i.e. subsistence, or cultural activities, community service, education, organizing or advocacy efforts). Meaningful *Youth Engagement* focuses on involving youth in decision-making and all phases of planning, organizing and evaluation of projects.
- Life Skills and Social Competencies - People who are resilient have the personal awareness, social and life skills to make positive choices, maintain healthy relationships, and succeed in life. (Sometimes called *Social, Emotional and Employability Skills*.)
 - ✓ Life skills include the ability to make decisions, solve problems, resolve conflicts, think critically, manage stress and make healthy decisions
 - ✓ Social Competencies include abilities to communicate, resolve conflict, get along with others, empathize, and be culturally sensitive.

* *Building Developmental Assets* [™] is another way to increase resiliency and connectedness.

Measuring Resiliency and Connectedness

Resiliency can be measured by how much someone reports being supported, connected, meaningfully engaged and having the life skills and social competencies to maintain their health and wellness.

Short-term outcomes related to resiliency:

1. Having positive supportive relationships
2. Feeling like I belong to*name of place, organization etc*
3. Being engaged in meaningful activities
4. Having life skills and social competencies

Additional information may be found through the National Research Council², the author Bonnie Bernard,³ or in *Resiliency Basics Resource Guide* at http://hss.state.ak.us/dbh/prevention/publications/Resiliency_Connectedness_Basics.pdf

Culture is Prevention

Cultural Identity - Cultural Connectedness is a protective factor and a strengths-based approach associated with the prevention of substance abuse and suicide and an increase in

Culture is the sum total of ways of living, including values, beliefs, traditions, protocols, rituals, language, behavioral norms, ways of knowing and styles of communication.⁴

One's **Cultural Identity** is the extent to which someone connects to and practices the values, beliefs and traditions of their identified culture.

Ways to Measure Cultural Identity and Connectedness

Communities desiring to increase cultural identity or connectedness can evaluate their efforts in many ways, examples include:⁵

<u>Knowledge:</u>	Increased knowledge of their identified culture
<u>Attitudes:</u>	Increased appreciation and connection to their identified culture
<u>Behavior:</u>	Increased skills in specified cultural/traditional practices

Threats or Risk Factors associated with Cultural Identity

Alaska Native and American Indian (ANAI) persons or groups may experience higher levels of psychological and social stress due in part to historical or generational trauma, oppression and imposed cultural change. These adverse experiences or risk factors are associated with suicide and high rates of alcohol and other drug use.¹ *Other groups defined by ethnicity, age, ability, religious affiliation, or sexual orientation, may experience similar risk factors.*

Strengths and Resources

- **Alaska Native Cultural Competencies** The Alaska Native Heritage Center developed a list of cultural competencies by region. Competencies include: subsistence hunting practices, food preparation, language, tools, trade practices, housing, clothing, life passages, rituals, healing practices; governance structures, etc. http://hss.state.ak.us/dbh/prevention/programs/spfsig/pdfs/Alaska_Native_Cultural_Competencies.pdf
- **Traditional Values of Alaska** The traditional values of Alaska Natives are represented in this poster from the Association of Alaska School Boards, Alaska ICE. www.alaskaice.org

Section II: Resources for SPF Steps 1-5

Step 1: Assessment Resources

For a community to understand its problems and the underlying factors affecting those problems, information must be collected at the local and or regional level. A community assessment determines the needs and identifies the gaps (and any duplication) in the services or resources. Since problems do not happen in isolation of community social norms and practices, an assessment may include a review of local public and/or organizational policies.

A local needs assessment can answer such questions as: *What are the behavior problems facing our community and how significant are they? How prevalent are the risk factors or protective factors associated with the problems in the community? To what extent are people aware of the community resources and services?* A local needs assessment may include any of the following:

- A community profile: population statistics (demographics, cultures etc), local economy, transportation government, schools, public facilities, major regional organizations etc. **Alaska Community Database** has some of this information: http://www.commerce.state.ak.us/dca/commdb/CF_COMDB.htm
- Data related to areas of concern: examples major causes of death or injuries; prevalence of problematic behaviors (tobacco/ alcohol/drug use; suicides and suicide attempts; delinquency or violence related data ; teen births, etc)
- Prevalence of risk factors and protective factors associated with the problems

Data may come from local or regional sources (health departments, law enforcement, schools, etc.) Additionally, *community opinion surveys* may be useful to further understand community perceptions of major problems. Note: Data collection and analysis takes time! Planning team members must be prepared to make a commitment that may take several months.

Community Resource Assessment

This type of assessment focuses on your community's strengths and resources. Briefly describe your resources. *Remember, resources can include many things in a community!* After you make your list decide if there are gaps that need to be addressed. Below are a few examples of resources:

- Schools: pre-k through 12 grade, college and/or technical schools for all ages
- Health and social services available
- Key businesses, corporations or foundations that provide support or services to your community
- Faith-based or Culture-based groups and organizations
- Informal groups, clubs or affiliations (e.g. Rotary, Lions, Elks, Moose etc.)
- Key individuals that are supportive of your efforts and can make things happen!
- Other significant agencies, organizations programs and services available to children, youth, and their families in prevention, early intervention and or treatment of behavioral or public health

Resources:

- **The Community Toolbox.** Assessing Community Needs and Resources chapter:
http://ctb.ku.edu/en/tablecontents/chapter_1003.aspx

Prepared by Rural Alaska Community Action Program in partnership with the Denali Commission Jan 2006. www.ruralcap.com/www/attachments/125_Let-Your-Assets-Be-Your-Guide-Jan-2007.pdf

Step 2: Capacity Building Resources

What is an effective coalition?

Coalition building is a proactive strategy that promotes coordination and collaboration, and makes efficient use of limited community resources. By connecting multiple and diverse sectors of a community and developing a comprehensive approach to a common issue (such as driving under the influence, domestic violence, or suicide prevention), coalitions can achieve amazing and sustainable outcomes—much more than could ever be achieved alone.

Building capacity within your coalition involves increasing membership to include a diverse mix of community members with different skills, resources, and experiences. Coalitions must engage stakeholders of all ages from youth to Elders, as well as build cultural responsiveness. Members of the public should hold leadership positions, not substance abuse professionals. Effective leaders are vital to the success of a coalition; a leader must be able to keep the vision and goals of the coalition alive and motivate the community to take action. Coalitions must have a clear plan of cooperation and division of responsibilities amongst coalition members.

Community Readiness

The State of Alaska’s Division of Behavioral Health understands the importance of knowing if your community is “ready” to make social change. The *Community Readiness Overview* will help you identify ways you can assess your community for its readiness to begin a social change process. The basic premise of looking at your community’s readiness is to help match an intervention or strategy to a community’s readiness for change.

Community Readiness Overview

Identify your issue/what you want to change in your community.

1. Identify your “community” with respect to the identified issue-- this may be a geographical area, a group within that area, an organization or any other type of identifiable “community.”
2. Ask questions to determine your community’s level of readiness to address the identified issue.
3. Select strategies/conduct workshops based on your community’s readiness: there are several strategies appropriate for each stage of readiness.
4. Review how effective your efforts have been.

Six Questions to Ask About Your Community's Readiness

1. **Community Efforts:** To what extent are there efforts, programs and policies to address the identified issue?
2. **Community Knowledge of the Efforts:** To what extent do community members know about local efforts? Are the efforts available to all segments of the community?
3. **Leadership:** To what extent are community leaders and active community members supportive of the issue?
4. **Community Climate:** What does the community know about the issue? Is there interest in the issue; is the community ready to take action?
5. **Community Knowledge about the Issue:** How well do community members understand the causes of the problem and how it impacts the community?
6. **Resources Related to the Issue:** Are local resources- people, time, money, space, etc- available to support change effort

What Level of Readiness Does Your Community Fall Under?

1. **No Awareness:** The community or leaders do not generally recognize Issue as a problem (or it may truly not be an issue).
2. **Denial Resistance:** At least some community members recognize that it is a concern, but there is little recognition that it may be occurring locally.
3. **Vague Awareness:** Most feel that there is a local concern, but there is no immediate motivation to do anything about it.
4. **Preplanning:** There is clear recognition that something must be done, and there may be a group addressing it. However, efforts are not focused or detailed.
5. **Preparation:** Active leaders begin planning in earnest. Community offers modest support of efforts.
6. **Initiation:** Enough information is available to justify action. Activities are underway.
7. **Stabilization:** Administrators or community decision makers support activities. *Staff are trained and experienced.*
8. **Confirmation/Expansion:** Efforts are in place. Community members feel comfortable using services, and they support expansions. Local data are regularly obtained.
9. **High Level of Community Ownership:** Detailed and sophisticated knowledge exists about prevalence, causes, and consequences. Effective evaluation guides new directions. Model is applied to other issues.

Additional Community Readiness Resources:

- Community Readiness Worksheet Primer: <http://www.hss.state.ak.us/dbh/prevention/publications/>
- Tri-Ethnic Center http://triethniccenter.colostate.edu/communityReadiness_home.htm

(The originators of the Community Readiness model)

Step 3: Planning Resources

Risk and Protective Factors

Careful identification of community-specific risk and protective factors is a critical step in selecting the best strategies to impact the behavioral health conditions in your community. The factors listed below can be focused on both the youth and adult populations, but was designed for adolescents.

<p style="text-align: center;">PROTECTIVE FACTORS</p> <p>Characteristics within the individual or conditions in the family, school or community that help youth cope successfully with life challenges & existing risk factors.</p> <p><u>FAMILY</u></p> <ul style="list-style-type: none"> • Family connectedness (attachment & bonding)* • Positive parenting style • Living in a two parent family • Higher parent education • High parental expectations about school <p><u>SCHOOL</u></p> <ul style="list-style-type: none"> • Connected to school* • Caring school climate • Student participation in extracurricular activities <p><u>COMMUNITY</u></p> <ul style="list-style-type: none"> • Positive connection to <i>other adults*</i> • Safe, supportive, connected neighborhood • Strong community infrastructure (services for those in need) • Local, state policies and practices that support healthy norms and child-youth programs • Range of opportunities <i>in the community</i> for meaningful youth engagement <p><u>INDIVIDUAL - PEERS</u></p> <ul style="list-style-type: none"> • Engagement in meaningful activities • Life skills and social competence* (<i>Social Emotional/Employability Skills</i>) • Cultural identity and connection* • Positive personal qualities • Positive self concept • Positive peer role models • Religious identity • High grade point average 	<p style="text-align: center;">RISK FACTORS</p> <p>Characteristics within the individual or conditions in the family, school or community that <u>increase the likelihood</u> youth will engage in problem behavior.</p> <p><u>FAMILY</u></p> <ul style="list-style-type: none"> • Experienced child abuse (physical, sexual) or other family violence* • Family history of the problem behavior • Family management problems • Family conflict • Favorable parental attitudes and involvement in problem behaviors • Household access to substances or guns <p><u>SCHOOL</u></p> <ul style="list-style-type: none"> • Academic failure • Lack of personal commitment to school <p><u>COMMUNITY</u></p> <ul style="list-style-type: none"> • Availability of alcohol/other drugs* • Community norms and laws* • Availability of firearms • Transitions and mobility (<i>moving a lot</i>) • Low neighborhood attachment & community disorganization • Poverty <p><u>INDIVIDUAL - PEERS</u></p> <ul style="list-style-type: none"> • Early initiation of the problem behavior* • Feeling depressed or suicidal* • Loss of cultural identity and connection* • Constitutional factors (see definition) • Childhood media exposure to violence and alcohol • Early and persistent antisocial behavior • Friends who engage in the problem behavior • Favorable attitudes toward the problem behavior (low perceived-risk of harm) • Gang involvement • Older physical appearance than peers • Paid work more than 20 hrs/week • Perceived risk of untimely death
<p style="text-align: center;">* Priority Factors selected by the Behavioral Health SPF/SIG Epidemiological Influences group.</p> <p>Note: the definitions of each factor, supporting research and additional risk and protective factor information is available at: http://hss.state.ak.us/dbh/prevention/publications/default.htm</p>	

There are six broad prevention strategies that address risk behaviors (e.g. alcohol/tobacco/drug use, suicide etc.) and can increase resiliency. A community coalition or planning team must decide which strategy(s) work best to address their needs or issues. Communities at different *levels of readiness* may need to use different strategies. For example, a community at the beginning stage of readiness may use strategies one and two (information and education). After the community is “more ready” to address the issues more deeply, other strategies may be selected. *Community efforts are most effective when combinations of strategies are used, together.*

1. DISSEMINATION OF INFORMATION

This strategy provides information about the nature and extent of the problem, its warning signs or its solutions. It may provide information about available prevention programs and activities within an agency. Dissemination of information is characterized by one-way communication between the source and the audience, with limited contact between the two. *Examples include:*

- Resource centers
- Pamphlets, posters, flyers
- Motivational events or speakers¹
- Newspaper and newsletter articles
- Radio and television PSAs (public service announcements)
- Community resource directories
- Health fairs & some wellness gatherings
- Website information
- Information-based media campaigns

2. EDUCATION*

This strategy involves two-way communication. It is different from strategy one (disseminating information) in that it’s based on the interaction between the educator and the participants. Activities under this strategy often focus on life skills (e.g. problem solving, decision making, communication skills, stress management and coping strategies.) This strategy may also provide training in critical thinking skills and media literacy. *Examples include:*

- Classroom and small group sessions
- Peer leader and peer helper programs
- Education programs for youth groups
- Social, emotional/employability skills
- Life skills (bullying prevention, conflict resolution, refusal skills, media literacy or subsistence skills)
- Staff, volunteer or community workshops on prevention or early intervention topics
- Parenting and family management classes
- Cross-age teaching or peer education
- Interactive technologies

3. “ALTERNATIVE” (MEANINGFUL) ACTIVITIES*

This strategy provides for the active engagement of the target audience in several phases of the project including: planning organizing, implementation and evaluation. These efforts are most effective when used with other prevention strategies. *Examples include:*

- Community service activities
- Youth centers & community drop-in centers
- Intergenerational events and celebrations
- Culturally-based activities (subsistence activities, language, dance, arts instruction etc.)
- Some social & recreational activities (e.g. drug-free dances and parties)
- Recognition events that celebrate individual or group accomplishments
- Leadership activities
- Mentoring programs
- Job shadowing, internships, workplace experiences

* *These strategies lend themselves to building protective factors, resiliency and Developmental Assets.*

1. The list of six strategies was developed by Center for Substance Abuse Prevention (CSAP)
2. Motivational speakers can have a powerful short-term impact but within 72 hours research has shown that it's usually gone.

4. COMMUNITY-BASED PROCESSES

This strategy aims to enhance community capacity to more effectively provide prevention, early intervention and treatment services. Activities in this strategy include organizing, planning, training, building coalitions, networking and enhancing the effectiveness of programs. Examples include:

- Coalitions, collaborations and/or wellness teams
- Community team-building activities
- Needs assessments & community readiness surveys
- Cross-systems planning (e.g. schools, health, police)
- Youth-Adult partnerships addressing community issues
- Efforts to decrease barriers to services (e.g. scholarships, transportation, child-care; assure cultural sensitivity)

5. “ENVIRONMENTAL” APPROACHES*

This strategy seeks to change the conditions around people. Specific strategies aim to change community social norms/attitudes and practices or, its policies and laws (ordinances, codes or standards). Additionally, it may include changes made at the organizational level (its own policies and practices) that promote healthy behaviors. *Examples include:*

- Review and modify policies related to tobacco or alcohol **prices, taxing or advertising**
- Establish and/or **review local ordinances and practices** related to alcohol/drugs and firearms. Examples:
 - Number, location, hours of operation or criteria for licensing liquor stores or outlets
 - 1) Purchasing of liquor or firearms
 - 2) Underage drinking, curfew hour, etc.
- Increase local **enforcement and judicial sentencing** related to:
 - 1) Availability or distribution of tobacco, alcohol or other drugs
 - 2) Underage drinking
 - 3) Driving while intoxicated
 - 4) Family and dating violence or juvenile delinquency offenses
- Change **norms or attitudes** about alcohol, tobacco or illegal drugs, drinking and driving, violence or bullying behavior, mental health, sexual orientation, cultural beliefs, etc. Examples:
 - 1) Drinking while pregnant
 - 2) Storing firearms safely (to prevent unintended injuries and suicide among depressed individuals)
 - 2) Assisting a child/youth in need (cold, hungry, not adequate clothing)
 - 3) Changing **public perceptions** and norms about youth and their capabilities
 - 4) Promoting a community’s “social responsibility” to supporting all children & youth
- Change **school norms**, policies, programs and practices to increase a positive school climate
- **Media strategies** to assure safe, responsible reporting about suicide, mental illness and substance abuse
- Media strategies addressing underage or drinking while pregnant, or balanced reporting about youth
- Vendor **education** or business practices promoting health (e.g. smoke-free policies, always-checking identification, or youth-friendly practices)

6. INDIVIDUAL SUPPORT AND REFERRAL

This strategy identifies those who have begun displaying the warning signs or are experiencing problems as a result of engaging in risk behaviors (e.g. use of tobacco, alcohol or other drugs, skipping school, late to work, isolating themselves, giving personal items away). This strategy also assesses if concerning behavior can be reversed through education or referral of services. *Examples:*

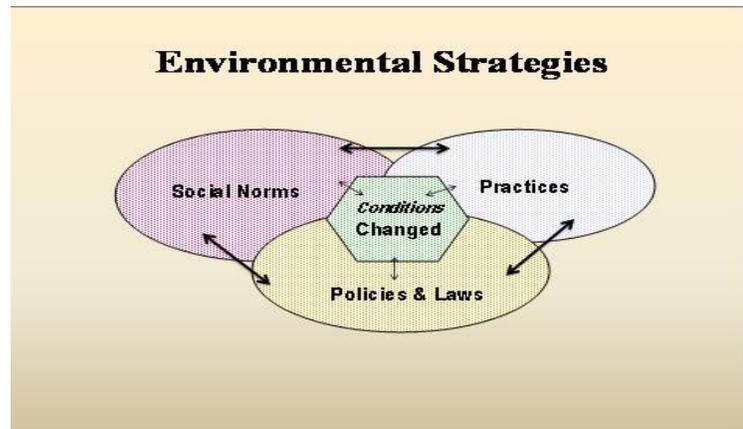

- Support groups, talking/healing circles
- Suicide survivors groups

- Driving while intoxicated education programs
- Student & employee assistance programs
- Depression and mental health screening programs
- Alcohol information schools
- Crisis Lines or hotlines
- Nicotine use and addiction screening

Adapted from the Center for Substance Abuse Prevention,
Alaska Division of Behavioral Health, Section of Prevention & Early Intervention, 2010

Environmental Strategies

The Division of Behavioral Health strongly urges all applicants to consider Environmental Strategies as part of their prevention efforts

Environmental Approaches:

Environmental approaches are the intentional efforts to change the conditions around people to ensure greater health, safety and wellness. Specific environmental strategies seek to change a community's social norms, practices, policies or laws. <http://hss.state.ak.us/dbh/prevention/publications/default.htm>

Perceptions/Social Norms: The way people think and feel about something or someone. Many communities use social marketing approaches to change social norms or perceptions. Examples: Youth perception of parent's approval or disapprove tobacco or alcohol use; beliefs/attitudes about certain groups of people (i.e. kids these days, attitude)

Social Norms: The *collective* thinking/attitudes or behaviors about what is normal or acceptable.

Examples: Students belief that everyone is doing "it". The belief to NOT drink while pregnant

Practices: The way people do things *intentionally*; customs, traditions, protocols. They may be formal or informal.

Informal practices are typically the way individuals interact. *Examples:* the way people greet each other; the naming of a child; the rituals around death, the way neighbors may respond to a child when there is a problem.

Formal practices are typically within an organization or group (rules or procedures.) They come from figures of authority (e.g. coaches, directors, school principals), or may evolve over time as, "the way things are done." *Examples:* Discipline procedures, teaching strategies; how a school or classroom is managed; how customers are treated; how a leader evokes youth engagement.

Policies: the way an organization governs or manages itself and its employees; policies institutionalize an organization's values and practices.

Examples: No smoking within the restaurant; background checks for everyone working with children; random drug testing of student athletes.

Laws or local ordinances: A set of "rules" to govern a community/state/country. They are created by the legislative body and enforced by the administrative branch of government.

Examples: Curfews, taxes on tobacco or alcohol, bar hours of operation, parent permission for teens to get services; mandatory reporting of child abuse.

Additional Resources:

Prevention Principles

Prevention principles include the common elements [found in research] that identify effective prevention practices. This list may be used to guide the thinking, planning, selection, and delivery of your efforts. If a community already has a prevention program or strategy in place, these principles may be used to assess the program's potential effectiveness. The following principles have emerged from research supported by the National Institute of Drug Abuse (NIDA) and the National Research Council.

1. Prevention efforts must address the risk and protective factors associated with the problem (e.g. substance use)
2. Prevention efforts must begin early before problems arise; they anticipate times of challenge and crisis. Intervene early and plan for life and school transitions.
3. Prevention efforts need to be reinforced over time. Consider duration of exposure (time), the dosage (how often) and follow-up efforts.
4. Information alone doesn't change behavior. (Showing consequences in a "scare tactic" format has only a short-term impact.) Information needs to be combined with other prevention strategies, see number 10.
5. Prevention planning needs to involve "stakeholders" (people who care about the issue) -- in ways that have meaning for them.
6. Prevention efforts must include the community - family, schools, business, faith, community groups & individuals, not just one organization.
7. People at different levels of risk, need different kinds of prevention or intervention strategies.
8. Prevention efforts need to be appropriate for age, gender and cultural backgrounds.
9. Prevention efforts that incorporate resiliency and positive youth development approaches emphasize:
 - Supportive relationships and connectedness
 - Activities that have true meaning to the participants
 - Skill building and some recognition of success
10. Community prevention efforts are most effective when combinations of strategies are used:
 - Public Information
 - Alternative, meaningful activities
 - Environmental approaches*
 - Education/skill building
 - Community capacity building
 - Individual support and referral

Environmental Approaches aim to change conditions: norms, perceptions, policies, practices or laws within an organization or community.

Logic Models

A logic model is a planning tool to help you address your key prevention efforts. Below is an outline of the elements to include in a logic model; in addition a template and logic model example are provided to assist you in developing your own logic model. We recognize that there are many different logic model styles—please pick the model that best meets your needs and planning style—this template is only one example.

1. Activities: Activities are what you do to reduce risk factors or increase protective factors. These are the processes or events you undertake using the resources available. List your major programmatic activities by what is being done by when. Some logic models will include a timeline or provide a separate timeline that identifies a detailed list of activities or milestones to be achieved with who is responsible. *Examples:*

- Provide 5 training sessions by Nov. 2011
- Sponsor 1 Parent Training by Feb 2011
- Develop Wellness Plan by Feb
- Host at least 8 youth-led events by June 2011

2. Target Population: The people you are focusing your prevention efforts on. As a result of your efforts you hope to see changes in this population. *Examples: parents, teachers, students, children, youth, whole community.*

3. Outputs: The number of activities, events, or participants served. It could include the duration of events, or products produced by your activities. *Examples:*

- 20 HS students receive 1 hour of monthly life skills sessions.
- 1,200 newsletters mailed to families

4. Short Term Outcomes: Short-term outcomes are what you cause to happen. They describe changes in attitudes, knowledge, skills, behaviors or conditions that the program produces. *In some cases the short term outcomes could be your selected risk or protective factors.* Identify the appropriate, measureable outcomes for your program. This can be at the individual, organizational, or community level. *Examples:*

- Increase the age of first use of alcohol by high school students.
- Increase life skills among club participants
- Increase the perception of the harmful effects of alcohol among middle school students
- Increase cultural identity and subsistence skills among participating students

Hint: structure your outcome statements using the following format:

The Desired Effect	IN WHAT	For Whom
Increase	Attitude	Program Participant
Decrease	Perception	Client
Maintain	Knowledge	Individual
Improve	Skill	Family
Reduce	Behavior	Neighborhood
Expand	Condition	Organization
Etc.	Etc.	Community

5. Long Term Outcomes: Long-term outcomes are what your program expects to achieve over time. These impacts are influenced by *other* community efforts, in addition to your program. Applicants must select from the following:

- All Alaskan communities, families and individuals are free from the harmful effects of substance use, dependency and addiction.
- Alaska children, youth and adults are mentally healthy and living successfully.
- All community members are connected, resilient and have basic life skills.

Logic Model (*Template*)

Logic Model for: _____
Project Name & Organization Date

Two Risk /Protective Factors addressed by this project: _____
 * Short term outcomes *could be* your selected risk or protective factors

Activities Activities selected are based on your Risk & Protective factors. Describes what by when (timeline)	Target Population	Outputs Number of activities, events, products, participants	Short Term Outcomes* Changes in attitude, knowledge, skills, behavior or external condition	Long Term Outcome Select from three given in RFP

Logic Model *(filled out)*

Project Name and Organization: “Ankorak” / Kyea Youth Services

Two Risk or Protective Factors addressed: Supportive adults & Engagement in meaningful activities

Activities Activities selected are based on your Risk & Protective factors. Describes what by when (timeline)	Target Population	Outputs Number of activities, events, products, participants	Short Term Outcomes* Changes in attitude, knowledge, skills, behavior or external condition	Long Term Outcome
1. Provide staff training three times in the year	Providers and volunteers	# of trainings # of people attend	Increase in adult leader skills	<p>All Alaskan communities, families and individuals are free from the harmful effects of substance use, dependency and addiction.</p> <p>All community members are connected, resilient and have basic life skills.</p>
2. Implement the silent mentoring project <i>from Oct.- April</i>	Middle and High School age youth	# of students mentored	<p><i>Activities 2-7 together will impact all three outcomes:</i></p> <ul style="list-style-type: none"> • Increase supportive youth-adult relationships • Increase in life skills and social skills • Increase engagement in meaningful activities 	
3. Teach life skills <i>through weekly group sessions</i>	Middle and High School age youth	# of lessons taught # of students		
4. Support youth-led service projects, <i>throughout the year.</i>	High school age youth	# of youth participating # of projects		
5. Host cultural activities at least monthly	All community members	# of youth & community members participating # of sessions held		
6. Host student support group <i>twice a month</i>	Middle and High School age youth	# of youth attending # of sessions		
7. Conduct post-survey of participants in May 09.	Middle and High School age youth	# of completed surveys		

The Evaluation Plan for this *sample project* may be found on page 29-30 of this document.

NOTE: Your short-term outcomes need to relate *in some way* to at least one of the key statewide population indicators, in Table 1, which can be found on page 4 of this document.

Step 4: Implementation Resources

In order to support Alaska SPF grantees in selecting the right alcohol prevention strategy(ies) for their unique community, a workbook titled: *A Guide to Selecting Evidence-Based Strategies for Your Alaska Community*, is being created by the Evidence-Based Interventions (EBI) Workgroup. This workbook will help to guide grantees through the process of reviewing and selecting strategy(ies) for their community based on whether the strategy is; 1) *relevant* to the needs of the community, 2) *feasible* given the resources and time available, 3) *appropriate* given the community's culture and values, 4) *sustainable* after funding has ended, and 5) *likely to be effective* based on evidence of past success in reducing the identified alcohol related target behavior. Other considerations outlined in the workbook include the important balance of making modifications to improve the strategy's fit to the community's unique culture and values while staying true to the strategy's design and purpose.

This workbook also contains five worksheets which grantees will complete and submit about each chosen strategy with their strategic plan to the Division of Behavioral Health. Your strategic plan and the attached worksheets will be reviewed by the Alaska SPF SIG Project Coordinator and a panel of informed experts which may include community prevention leaders or experts, program evaluators, elders, or other respected leaders in communities throughout Alaska. Once it is approved, grantees will be ready to begin Step 4 of the SPF process - Implementation.

While this workbook is currently underway, it is anticipated to be ready for use by grantees at the start of project funding on July 1, 2011.

Evidence-Based Interventions

In the healthcare field, evidence-based interventions, also called EBI, generally refer to approaches to prevention or treatment that are validated by some form of documented evidence. . Alaska has a unique population with diverse needs and make up. Many know that programs which may prove effective and evidence-based in the “Lower 48” may not serve our communities well. Because of this, evidence-based interventions may stand in contrast to approaches that are based on culture, tradition, belief, or anecdotal evidence. Below is a list of Evidence-Based categories the Substance Abuse and Mental Health Services Administration (SAMHSA) uses for identifying evidence-based interventions.

At times too much emphasis on EBIs may restrict practitioners from exercising their own judgment to provide the best care for individuals. For this reason many organizations have adopted definitions of evidence-based practice that emphasize balancing the "research" with the "practical." For the purposes of this resource guide and related material, evidence based programs and interventions are left to users to make their own judgments about which interventions are best suited to their particular needs.

NOTE: In earlier resource guides, prevention practices and interventions were identified as either evidence-based, model or promising programs. SAMHSA is no longer maintaining a listing of model and promising programs and will only be referenced as “Legacy” programs as a historical reference. It is recommended that users contact these program sources directly to determine their effectiveness as identified below.

1. Federal Lists or Registries are readily accessible and easy-to-use public resources. Historically, most federal lists or registries are limited in scope since they are geared to interventions most amenable to assessment using traditional research designs and methodologies for evaluations. An example of a federal list or registry can be found at: <http://www.nrepp.samhsa.gov/>

2. Peer-Reviewed Journals include primary research literature that identifies potential prevention interventions and presents findings on what works and what doesn't work. However, peer-reviewed journals still require a critical assessment of the quality of research presented and the conceptual model on which it is based. Critical consumers must be prepared to thoroughly read the material thoroughly to understand the background of the intervention, conceptual model used, the study population including the baseline in which intervention will be measured, quality of the study design, if the intervention was able to measure up to the study's expectations, and finally the summary and discussion of the study's implications for future use. "Prevention Principles" (see page 20) that have already been reviewed and identified as "what works" falls under this category.

3. Documented Effectiveness refers to interventions and strategies that have shown to be effective in the field of prevention and are important to our development of prevention programs and services. Formerly, these were identified as "Model and Promising Programs". These programs were listed on national registries; however, they did not meet the criteria for listing as evidence based programs. Many prevention projects and programs may not have the resources, technical expertise or extra funding to support extensive research efforts to be listed as an evidence-based program, however, they have implemented strategies based on solid theory, is supported by a documented body of knowledge and shows a strong consensus of effectiveness in the field of prevention.

This approach also validates and incorporates the culture and values of a community that may otherwise be overlooked by Western research methods. This is especially true among smaller rural or ethnic communities that are not representative of larger population groups.

Additional Resources:

Comprehensive Databases for Evidence-based, Effective and Promising Approaches to Impact Behavioral Health Conditions. See page 35 in this document,

[Identifying and Selecting Evidence-Based Interventions](#)

Step 5: Evaluation Resources

Evaluation Plan

Applicants are required to submit an evaluation plan that answers the following questions:

1. What do you ultimately hope to achieve?

Select one or more of the **long-term Behavioral Health outcomes**:

- All Alaskan communities, families and individuals are free from the harmful effects of substance use, dependency and addiction.
- Alaska children, youth and adults are mentally healthy and living successfully.
- All community members are connected, resilient and have basic life skills.

2. How much will you do?

This will measure the number (quantity) of people served and services offered.

Example, describe:

- a) How many people do you aim to serve? How often will your prevention efforts take place?
- b) How will you collect this information?

3. How well did you (will you) provide your prevention efforts?

This will measure the **quality of your prevention efforts.**

Example, describe:

- a) How will you get feedback from your participants? Or, how will you assess your capacity and efficiency?
- b) How you will use that information to improve your program or services?

4. Will anyone be better off, because they participate in your prevention efforts?

Fill out the template on the following page or submit the one you are using.

- a) Identify two to four **short-term outcomes** from your logic model that you will measure. *In some cases the short-term outcomes could be your selected risk or protective factors.*
- b) Describe how you will collect information related to each of your outcomes. (Examples include: surveys, interviews, focus groups, direct observations, client records, etc.) Please provide the actual evaluation tool (s), if you have them already.
- c) Identify the statewide prevention indicator(s) that most relate to your short-term outcomes see (Table 1. On page 3)

Note: if the target audience is between the ages of 10-18 the applicant is strongly encouraged to work with their school district to participate in the YRBS or SCCS surveys.

Evaluation Plan *Template* (collecting short term outcomes)

Program Date

Short Term Outcomes List 2-4 measureable outcomes from your logic model	Data gathering strategy Identify the tools, surveys or way you will get this information	Statewide Prevention Indicator related to your outcome

Special Notes:		

Evaluation Plan and Sample Indicators

<p>1. How much service/programming is being provided? <i>This relates to how much is being done. It's most often reported as a number (#).</i></p> <p>Examples: # of participants (by age, ethnicity) # of activities offered (by activity) # of hours volunteered # of times PSA is aired # of locations information is posted</p>	<p>2. How well are programs/services being delivered? <i>This relates to how satisfied your participants are with your services. It also addresses the capacity, efficiency and infrastructure of your organization or coalition.</i></p> <p>Examples of satisfaction measures: % of satisfied participants % of client suggestions implemented % of students who feel supported by staff % of youth who attend most activities</p> <p>Examples of organizational capacity measures: % of staff who complete <i>Gatekeeper</i> training % staff turnover or retained after two years % staff/participant ratio</p>
<p>3. Is Anyone Better Off What impact have you had on your target audience?</p> <p><i>This relates to: the measurement of your short term outcomes. What impact have you had on your target audience? Short term outcomes identify change in either: attitudes/perception, knowledge, skills, behavior or conditions, as a result of your prevention work. (It's typically reported as a percentage.)</i></p> <p>Examples of short term outcomes:</p> <ul style="list-style-type: none"> • Increase youth <u>perception</u> of the harmful consequences of alcohol use <i>Indicator: % of youth who believe alcohol use by teens, is harmful, compared to baseline</i> • Decrease youth <u>perception</u> that most of their peers regularly use alcohol <i>Indicator: % of youth who believe most of their peers are not using alcohol, compared to baseline.</i> <p><i>Other examples..:</i></p> <ul style="list-style-type: none"> • Increase community's <u>awareness</u> of suicide intervention/prevention services • Increase participant's <u>knowledge</u> of FASD. • Decrease the number of injuries resulting from driving while intoxicated (behavior) • Increase workshop participants decision making and problem solving <u>skills</u> • Improve students social/emotional <u>skills</u> • Reduce the purport ion of retail outlets that sell liquor to people underage (conditions) • Increase the percent of youth who have 3 or more supportive adults (behavior) • Increase the percent of adults who reach out and support youth (behavior) • Decrease youth access to alcohol (conditions) • Increase a school's positive school climate (conditions) 	

Evaluation Plan *sample*

Based on the logic model for the project:
[Ankorak \(see page 23\)](#)

What do you ultimately hope to achieve?

Identify one or more of the long-term outcomes

Our long-term outcomes are:

- All Alaskan communities, families and individuals are free from the harmful effects of substance use, dependency and addiction.
- All community members are connected, resilient and have basic life skills.

1. How much will you do?

How many people you aim to serve? How often will your efforts take place?

We hope to serve 250 youth between the ages of 6-18; we will do this by:

- Providing staff training *,three times in the year*
- Implementing the silent mentoring project, *throughout the year.*
- Teaching life skills using the “Mallory Thompson” program *through weekly* group sessions
- Sponsoring youth-led service projects, *at least once per quarter*
- Hosting cultural activities, *monthly*
- Conducting a student support group, *every other week.*

How will you collect this information?

- We will keep logs of how many people participated and how many sessions were held and when for each activity.

2. How well did you provide your prevention efforts or services?

How will you get feedback from your participants? Or, how will you assess your capacity and efficiency?

- We will measure the quality of our activities in three ways:
 - We have a suggestion box for our youth to give us input.
 - Our youth leader will hold feedback sessions every quarter, for students to tell us what they like and don't like about our activities.
 - We will review on an annual basis the percent of youth leaders that have participated in 8 or more hours of professional development training.

How you will use that information to improve your program or services?

- Twice a year our staff and volunteers have a special lunch where we discuss what is going well and not going well with our programs. The suggestions and feedback provided by the participants are used to make improvements. Additionally we have youth participants join us on our interview committees when hiring a new staff person.

3. **Will anyone be better off?** (Because they participated in your prevention efforts?)
- Identify two to four short term outcomes* from your logic model that you will measure, and be held accountable for.
 - Describe how you will collect information related to each of your outcomes.
 - Identify the statewide prevention indicators that most relate to your selected outcomes.

Our plan for collecting the project’s short-term outcomes:

Short Term Outcomes List 2-4 measureable outcomes from your logic model	Data gathering strategy Identify the tools, surveys or way you will get this information	Statewide Prevention Indicator related to your outcome
Increase supportive youth-adult relationships	Youth Risk Behavior Survey*	Percent of youth reporting supportive relationships
Increase in life skills	Mallory Thompson Skill Inventory*	Percent of students who feel they have social, emotional/employability skills
Increase engagement in meaningful activities	Youth Risk Behavior Survey*	Percent of youth reporting engagement in meaningful activities
<i>*School Climate and Connectedness Survey measures each of these outcomes as well.</i>		

Section III: Reporting Documentation

Quarterly Reports

Successful applicants will be required to submit quarterly narrative and fiscal reports on the progress of their prevention efforts, including measurable outcomes. Fiscal reports are submitted through the DHSS e-grants system. Once an applicant is successful, training in e-grants is available.

A year-end evaluation of each grantee's prevention efforts is required with the 4th quarter report.

The Division of Behavioral Health utilizes Performance Based Funding to determine annual continuation funding based on progress made by each grantee. All grantees will be assessed annually regarding their progress to date at the conclusion of the 3rd quarter reporting period. Assigned Program Coordinators will complete a Performance Assessment Review, prior to continuation funding for the next year. Individual reviews will be shared with grantee staff to determine if there are needs for training and technical assistance to continue to improve project outcomes.

Prevention National Outcome Measures (NOMS)

Like all states receiving federal dollars, the State of Alaska adopted, as required for funding the substance abuse prevention National Outcome Measures (NOMS). These measures are designed to enhance prevention efforts by tracking and identifying key substance abuse indicators that will inform us on whether we are meeting community-based needs with public funds. The Department of Health and Social Services is required to report on these outcomes on a state level. NOMs reporting items are included in the state's quarterly program reports.

Desired Outcome/Domain	Performance Measure
Increased Access to Services (Service Capacity)	Number of persons served by age, gender, race, and ethnicity.
Use of Evidence-Based Practices	Total number of evidence-based programs and strategies

Once an applicant becomes a successful grantee more detailed information will be provided related to all state reporting requirements.

Section IV: Additional Resources

Web Sites and Resources

Act for Youth: <http://www.actforyouth.net/>

A resource center for community based organizations promoting youth-adult partnerships. While located in New York, its resources (research, handouts, evaluations, strategies) are helpful and relevant for youth organizations anywhere.

Alaska Community Database: www.commerce.state.ak.us/dca/commdb/CF_COMDB.htm

This database offers community information summaries for each city or village in Alaska. Information available includes population, demographics, economy and transportation, and regional organizations.

Alaska Division of Behavioral Health, Prevention and Early Intervention Program:

<http://www.hss.state.ak.us/dbh/prevention/> . This website features several programs which were previously located in the Division of Alcoholism and Drug Abuse; the Office of FAS; Public Health; and Division of Mental Health and Developmental Disabilities. Our section's goal is to develop a clear, coordinated and comprehensive approach to promotion of healthy individuals, prevention of behavioral health problems, and earlier intervention when a problem is recognized.

Alaska's Epidemiologic Profile on Substance Use, Abuse and Dependency (2001-2005):

<http://hss.state.ak.us/dbh/prevention/programs/spfsig/pdfs/SEOW-2001-2005.pdf> This document provides a baseline epidemiological profile on substance use, abuse, dependence and consequences thereof between the years of 2001-2005.

Alaska ICE: <http://www.alaskaice.org> (*Initiative for Community Engagement*)

The statewide Developmental Assets initiative sponsored by the Association of Alaska School Boards. The initiative is based on the book, *Helping Kids Succeed ~ Alaskan Style*, that promotes the shared responsibility everyone has to help kids succeed in school and life.

Alaska Plan to Reduce and Prevent Underage Drinking:

http://www.hss.state.ak.us/dbh/prevention/docs/2009_underagedrinkplan.pdf This plan was released in October of 2009. The plan is organized to provide recommendations in eight strategy components. The recommendations are broken up by federal, state and local strategies. Communities may find strategies which work for them within the local strategy areas.

Alaska Suicide Prevention Plan:

http://www.hss.state.ak.us/suicideprevention/pdfs_sspc/SuicidePrevPlan050505.pdf

The 2004 Plan released by the Statewide Suicide Prevention Council, states its vision and identifies 13 prevention goals and corresponding strategies to address suicide. This Plan will be a useful resource for RFP applicants choosing to address suicide/suicidal behaviors in Alaska. Note: The Council is currently revising and updating the five-year plan; it will be released later in 2011.

Alaska SPF SIG Strategic Plan

http://hss.state.ak.us/dbh/prevention/programs/spfsig/pdfs/SPFSIG_AlaskaStrategicPlan.pdf

The Alaska Strategic Plan was developed for the Strategic Prevention Framework State Incentive Grant and approved by the Center for Substance Abuse Prevention. This plan elaborates on the Advisory Council's process of selecting Alaska's SPF SIG priority areas of underage drinking and adult heavy and binge drinking. It also speaks to how Alaska will allocate SPF SIG funds and how we will work toward and evaluate outcomes, as well as building state prevention infrastructure and capacity.

Behavioral Risk Factor Surveillance System (BRFSS):

<http://www.hss.state.ak.us/dph/chronic/hsl/brfss/default.htm> This system gathers information about the health related lifestyle choices of Alaskan adults.

Center for Substance Abuse Prevention, (CSAP): <http://www.samhsa.gov/about/csap.aspx>

Provides national leadership in the federal effort to prevent alcohol, tobacco, and illicit drug problems.

Community Anti-Drug Coalitions of America: <http://www.cadca.org>

Supports coalitions nationwide towards building drug-free communities and offers technical assistance and training, public policy, media strategies, and marketing programs.

Drug Strategies: <http://www.drugstrategies.org>

Promotes more effective approaches to drug problems and supports initiatives that reduce the demand for drugs through prevention, treatment, and law enforcement.

Forum for Youth Investment: <http://www.forumforyouthinvestment.org>

A national organization dedicated to increasing the quality and quantity of youth investments and youth involvement through research, advocacy, and policy development.

Innovation Center for Community and Youth Development and At the Table:

<http://www.theinnovationcenter.org/> This Center provides multiple resources and training for local organizations to design, manage and evaluate programs in youth and community development.

Join Together Online: <http://www.jointogether.org/>

A project of the Boston University School of Public Health, a national resource for communities working to reduce substance abuse and gun violence.

National Clearinghouse for Alcohol and Drug Information, (NCADI): <http://store.samhsa.gov/home>

A national dissemination agency for drug abuse information resources. NCADI offers online publications, research, databases, and links to other sites. A link called Prevention Online can be found through this site.

National Council on Alcoholism and Drug Dependence: <http://www.ncadd.org/>

Information on alcohol and drug-related public policy and legislation; statistical information about alcoholism and other drug addictions; and limited information on prevention and treatment programs.

National Inhalant Prevention Coalition: <http://www.inhalants.org>

Information about inhalants, including statistics, education, tips for retailers, prevention campaigns, and media awareness.

National Institute on Drug Abuse (NIDA): <http://www.nida.nih.gov/nidahome.html>

Mainly supports research in the area of drug abuse treatment but has some research results in the area of prevention.

National School Climate Center: www.schoolclimate.org

A national resource center for school climate, standards, and promotion of social and emotional, ethical, and academic skills.

Partnership for a Drug-Free America: <http://www.drugfreeamerica.org>

A private, non-profit, non-partisan coalition of professionals from the communications industry known for their national anti-drug campaign.

Prevention Institute: www.preventioninstitute.org/

Primary prevention focus; promoting policies, organizational practices, and collaborative efforts to improve health and quality of life.

Resiliency in Action: <http://www.resiliency.com>

An organization and newsletter to increase deeper understanding of resiliency.

School Climate Connectedness Survey (SCCS): <http://alaskaice.org/school-climate>

A school-based survey of 5-12 grade students, and staff conducted annually. SCCS measures several protective factors within the school and in community settings.

Search Institute : <http://www.search-institute.org>

The national organization that developed the youth Developmental Assets framework that has been adapted and used throughout Alaska.

Social Norms Institute (data base of websites): www.socialnorm.org/Resources/websites.php

This site provides a number of web-based resources that offer useful information for those using the social norms approach to promote health and wellness.

The Community Tool Box: http://ctb.ku.edu/en/tablecontents/chapter_1003.aspx

This site provides information, checklists, guidance, examples and resources on how to facilitate community planning, selecting effective approaches, conducting evaluation.

Tri Ethnic Center: <http://triethniccenter.colostate.edu/> Originators of the Community Readiness Model Website provides an overview of the model, downloadable handbook, FAQ, etc.

Western Center for the Application of Prevention Technologies, (WestCAPT):

<http://casat.unr.edu/westcapt.html> Offers steps for building scientifically-defensible prevention efforts from community readiness to evaluation. Science-based programs described with links to risk and protective factors, types, CSAP strategies, ethnicity, rural settings, etc.

Youth Risk Behavior Survey (YRBS): <http://www.hss.state.ak.us/dph/chronic/school/YRBS.htm> A school-based survey of high school students, conducted every two years. It measures injuries, mental health, use of tobacco, alcohol and other drugs, sexual behaviors, nutrition, physical activity and contains several resiliency-based questions. The survey provides useful risk and protective factor data.

Comprehensive Databases for Evidence-based, Effective and Promising Approaches to Impact Behavioral Health Conditions

NREPP: National Registry of Evidence-based Programs and Practices:

<http://www.nrepp.samhsa.gov/#start-content>

NREPP is a searchable database of interventions for the prevention and treatment of mental and substance use disorders. SAMHSA has developed this resource to help people, agencies, and organizations implement programs and practices in their communities

The Community Guide (U.S. Centers for Disease Control and Prevention):

<http://thecommunityguide.org/index.html>

This guide provides evidence based recommendations of what is known about effectiveness, economic efficiency, and feasibility of interventions to prevent disease and promote health in a variety of public health concerns including substance abuse, violence, and nutrition.

CSAP's Centers for the Application of Prevention Technology, Evidence Based programs:

http://captus.samhsa.gov/national/resources/evidence_based.cfm. This site provides information about evidence-based programs and practices, including links to federal websites and databases.

“What Works” for Child and Youth Development: Tools for Improving Services to Children and Youth (Child Trends):

http://www.childtrends.org/catdisp_page.cfm?LID=CD56B3D7-2F05-4F8E-BCC99B05A4CAEA04

Child Trend's “What Works” guide provides interactive tables which illustrate what works and what does not work in improving outcomes for children and adolescents.

Program Archives (Sociometrics): <http://www.socio.com/ysappa.php>

Programs Archives profiles outstanding prevention programs in key health areas (sexuality, health and adolescence, HIV/AIDS, youth substance abuse and prevention).It aims to facilitate the implementation of proven and cost effective initiatives.

Promising Practice Network on Children, Youth, and Families: <http://www.promisingpractices.net/>

The Promising Practices Network site highlights programs and practices and research evidence about what works in improving outcomes for children and youth.

Harvard Family Research Project: <http://www.hfrp.org>

This site provides evaluation and best practice resources for people who work directly with children, youth, and families. The main focus is early childcare/education, K-12 out-of-school time, and family and community involvement in education. Cross-disciplinary, innovative strategies and evaluation techniques are highlighted in their quarterly journal, *The Evaluation Exchange*.

School Connections – Healthier Choices <http://www.cdc.gov/Features/ConnectToSchool>

This CDC site provides an overview of the policies and practices that increase school climate, connections and the research supporting this protective factor.

Preventing Underage Drinking: Using Getting to Outcomes with SAMSHA's S.P.F to Achieve

Results: http://www.rand.org/pubs/research_briefs/RB9262/index1.html. This in-depth guide provides information on some evidence-based environmental strategies to prevent underage drinking.

Glossary

Adaptation: The degree to which a program undergoes changes in its implementation to fit the needs of a situation or community. Adaptation may include making culturally responsive adjustments and addressing regional differences. Although there are benefits to program adaptation, implementers need to be careful. An adapted program may lose the components that made the original program successful; a heavily adapted program could be unrecognizable from its original model.

ATOD: Alcohol, Tobacco and Other Drugs

CAPT: The Center for the Application of Prevention Technology (part of CSAP) provides resources and technical assistance to state and local prevention providers through its five regional centers. Alaska is affiliated with the western regional center known as, West CAPT.

Coalition/Planning Team: A coalition/planning team is a group of individuals representing different perspectives who come together to promote and support change. Coalitions can address a variety of community issues including, but not limited to, substance abuse prevention, violence prevention, community wellness, suicide prevention, obesity, homelessness, community justice issues and many other community concerns.

Community: a unified body of individuals linked by common interests or an interacting population of various kinds of individuals.

Community Readiness: The degree of support for, or resistance to, identifying specific issues as problems in the community. This also includes the current success the community is experiencing in planning, implementing, and sustaining effective prevention and early intervention strategies. The readiness identification tool can also include treatment programs that impact the behavioral health issues to be decreased or eliminated.

Connectedness: A significant protective factor. Connectedness is experienced as connection to people or a positive affiliation to “places”. Emotional support is provided by being close to, or attached to other people. Support provides assistance in working through problems, and guidance in taking on new challenges. Throughout the relationship, respect and high expectations are maintained. Connectedness also refers to a sense of “belonging” or identity” to a place or organization (i.e. feeling connected to school, a club, a team, a cause, or their culture.) Activities that increase supportive relationships and/or a sense of belonging to positive places, contribute to resiliency.

Contributing Factors: Another term for risk and protective factors, see their definitions.

Core Components: Those elements or main ingredients of a program that analysis shows are most likely to account for its positive outcomes.

CSAP: The Center for Substance Abuse Prevention provides national leadership in the Federal effort to prevent alcohol, tobacco, and other drug problems under the Substance Abuse and Mental Health Services Administration (SAMHSA).

Cultural Identity: is the extent to which someone connects to and practices the values, beliefs and traditions of their identified culture.

Cultural Sensitivity: Understanding and appreciating the cultural differences and similarities within a population, and being sensitive to the need for program adaptations amongst ethnic, racial, and social groups.

Developmental Assets™ the key building blocks in children's lives that help them grow strong, capable and caring. The Asset framework, used by many schools and communities identifies what kids succeed in school and life. The framework was developed by the Search Institute and captured in the book, *Helping Kids Succeed ~ Alaskan Style*, see *Alaska ICE website*. The framework overlaps the concepts of resiliency and protective factors.

Developmental stages: The age range of the target audience. Strategies are typically tailored to specific age groups or developmental stages. Examples: 0-5 years of age; 6-10 (elementary ages); 11-14 (early adolescents); 15-19(older adolescents); 20- 24 (young adult), etc.

Domains: Areas where prevention opportunities can take place, or where risk and protective factors, might occur; namely community, family, school, peer, and individual.

Early Intervention: Services designed to identify individuals who are at high risk for developing behavioral health problems. These services are also directed toward persons who are experiencing adverse effects of alcohol or other drug use but are not dependent. The services most often target from the IOM classification system as an indicated group or audience.

Effective Programs: Programs which are well implemented, well evaluated, and produce consistently positive patterns of results (across domains and /or replications). See resources and websites for a listing of effective program databases.

Environmental Strategies: Environmental strategies/approaches are the intentional efforts to change the conditions around people to ensure greater health, safety and wellness. Specific environmental strategies seek to change community social norms, practices, policies or laws.

Evaluation: The process of determining the impact of your efforts. Evaluation for the purposes of this RFP, asks applicants to measure the effectiveness of their prevention efforts in three ways: How much was done? How well was it done? Is anyone better off? See SPF, Step. 5.

Fidelity: The extent to which the delivery of a strategy/program conforms to the guidelines for implementing the original strategy/program. Example: A strategy delivered exactly as intended by its originator has high fidelity; a project delivered with considerable adaptations has low fidelity. A project carried out with absolute fidelity is considered a replication.

Indicator: A way to measure (quantify) an outcome. Your prevention efforts must lead to measurable short-term outcomes. Indicators are way of measuring your success. (e.g. Percent of students who graduate; Percent of workshop participants who score 90% or more; rate of out-of-home placements).

Indirect Cost Rate Agreement: Indirect Cost Rate Agreement refers to overall agency administrative overhead and is an agreement reached between the agency and the federal Internal Revenue Service. If a grantee applies an Indirect Cost Rate Agreement to the grant budget for their project, they cannot apply additional administrative costs to the grant budget.

Intervening Variables: Another term for risk and protective factors, see their definitions.

IOM (Institute of Medicine, Prevention Classifications: The Institute of Medicine (IOM) system classifies prevention strategies and activities according to the target population. There are three classifications

- **Universal strategies:** (indirect or direct): target the general population
- **Selective strategies:** target people at *higher-than-average risk* for the problem behavior
- **Indicated strategies:** target people already experiencing or engaging in problem behaviors, but *may not* have been diagnosed with a disorder.

Logic Model: A flowchart or graphic display of your prevention efforts. It identifies your strategies, target audience, outputs, and measurable short-term outcomes that lead to long-term outcomes.

Needs Assessment: A process by which the community collects data and examines its needs in specific areas. The assessment identifies the severity of problems and the resources available (and gaps) to address the issues.

Outcomes: Short-term outcomes let you know if anyone is better off because of your prevention efforts. They are measurable changes in attitudes, perceptions, knowledge, skills, behavior or external conditions. Long-term outcomes are typically a result of multiple, coordinated strategies over time, the measure is typically population-based.

Outputs: The number of activities, events, or participants served, may include duration of events, or products produced by your activities. *Examples:* 20 students receive 1 hour session, weekly.

Prevention: The proactive process of developing personal attributes and creating environments that promote the health, safety, and well-being of people. Research demonstrates that the most effective prevention strategies reduce personal, social, and environmental risk factors and increase/develop personal, social, and environmental protective factors.

Prevention Principles: The *common* elements of effective prevention practices, identified through research. Principles may guide the thinking, planning, selection, and delivery of prevention efforts. If a community already has a program or strategy in place, these principles can assess its potential effectiveness. (*Emerging research supported by the National Institute of Drug Abuse (NIDA) and the National Research Council.*)

Program: A planned and coordinated set of activities for a specific population, for a measurable purpose. Examples: service learning, mentoring, or life skills programs.

Project: A specific plan or undertaking to address a problem for a target population within a broader system.

Promising Programs: Projects or strategies that show some evidence of positive outcomes, but are not ready to be classified as effective programs.

Promotion: A strategy within IOM spectrum of behavioral health services. It emphasizes promoting the supporting the positive behaviors you wish to see.

Protective Factors: Characteristics within the individual or conditions within the family, school or community that help people cope with life challenges. When people successfully negotiate their problems and deal with pre-existing risk factors, they are less likely to be involved in problematic behaviors (i.e. substance abuse, violence, suicide, or early pregnancy.) Protective factors are instrumental in healthy development; they build resiliency, skills and connections.

Resiliency: The ability to successfully adapt (bounce back) from personal crisis, tragedies or life challenges (e.g. growing up in an alcoholic family). Resilient personal qualities include an easy-going temperament, being optimistic, having social emotional skills, problem solving skills and sense of autonomy and purpose. The concept of resiliency overlaps with protective factors and the Developmental Assets framework.

Resource Assessment: A list of a community's strengths and resources available to support a prevention effort. (may include people, organizations, facilities, etc.)

Risk Factors: Characteristics within the individual or conditions in the family, school or community that increase the likelihood youth will become involved in problem behaviors such as substance use, violence, suicide and early pregnancy. The more a community can reduce its risk factors, the less likely people will develop health and social problems later in life.

Social Norms: The way people think and feel about something or someone. It is the collective thinking, attitudes or behaviors about what is normal or acceptable. (Examples: Students belief that everyone is doing "it"; the belief you should NOT drink while pregnant; youth perception of parent's approval or disapprove tobacco or alcohol use.) Several communities have used social marketing approaches to change social norms or perceptions.

School Climate: The quality and character of school life. Positive school climate and connections to schools are powerful protective factors. School climate is based on patterns of students', parents' and school personnel's experience of school life and reflects norms, goals, values, interpersonal relationships, teaching and learning practices, and organizational structures. National and Alaska research has demonstrated a link between a student's perception of a positive school climate and higher grades and less risk behaviors.

Strategy: A combination of activities working together toward an intended outcome. CSAP has identified six prevention strategies.

Target Audience/Population: The people a strategy intends to reach. Selection of target audience/population should reflect the area of need prioritized through your community needs, resources and readiness assessment. See Institute of Medicine (IOM) further clarification.

Youth Development: Youth development is a natural process of growth that is enhanced in the presence of supportive relationships, and meaningful, challenging experiences. The concept of youth development is captured in the overlapping protective factor, resiliency, and Developmental Assets frameworks.
